Simplex Medical Systems, Inc. Announces Joint Manufacturing Agreement with Specialized Medical Devices, Inc.

HALLANDALE, Fla., June 4 /PRNewswire/ — Simplex Medical Systems, Inc. (OTC Bulletin Board:SMLX) has announced the completion of a joint manufacturing agreement with Specialized Medical Devices, Inc. of Lancaster, Pennsylvania to produce Simplex's Disposable Dental Airbrator™. This joint venture will allow Simplex to launch the marketing of the Simplex Disposable Airbrator™ this fall.

Production targets of 250,000 units per month are expected to be placed by September of this year. Simplex is currently working with major international companies to market the Airbrator™ world-wide.

The Simplex Airbrator™ is the first disposable, air abrasive dental handpiece that attaches to the standard pedestal air-line found in nearly every dental office. The Simplex Disposable Airbrator™ unit is a cost effective, simple to use, and completely safe way to perform the same tasks performed using other air-abrasive technology. The low cost of the unit dramatically opens the field of microdentistry to the practicing dentist without a large expense and infection control problems associated with the air abrasion units currently in use.

"This agreement with Specialized Medical Devices, Inc. now provides the comprehensive engineering and manufacturing support services necessary to bring the Simplex Airbrator™ to the market place pushing technology and craftsmanship to the limits," stated Henry Schur of Simplex Medical Systems.

Specialized Medical Devices, Inc. has demonstrated an ongoing commitment to excellence, with repeatable consistent production of precision products for over 33 years, according to Simplex. This commitment is reflected by dedication of Specialized Medical Device's personnel to meeting the demanding requirements of medical and dental device production. Specialized Medical Devices, Inc. has achieved ISO-9002 certification.

Simplex Medical Systems, Inc. is engaged in the development, manufacture, acquisition and marketing of a variety of products in the medical and Dental industry. All of Simplex Medical Systems' products are manufactured in the United States in FDA registered facilities. Some of the company's products are currently being evaluated in United States, Russia, Paraguay, Mexico, Venezuela, India, Thailand,
